Subject: Delaware spill
To: Debra Hill <debra_hill@fws.gov>

Deb,

Just got a report from our lead environmental specialist that a produced water spill occurred sometime on August 1st and has entered the Delaware River in Texas. This is important to us because the river flows from Texas into New Mexico before reaching the Pecos River and going into Red Bluff Reservoir. The report indicated that the spill was 18,000 barrels (756,000 gallons) of produced water, of which 10.8 barrels (454 gallons) was oil skim. I have staff going to monitor the Delaware River from BLM lands to identify any impacts to vegetation and wildlife. Please let me know how we can be of assistance in monitoring or further responding to this incident.

I would guess that any agency or potential participant that has shown interest in the Texas Hornshell CCAA would appreciate a courtesy heads up on the incident.

Thanks,
.....
